```
Day-13
--------
Access modifiers
-------------
public - we can access everywhere
protected - we can access  outside of the package but through inheritance
default - only within the package
private - only within the class

Wrapper Classes
-----------------
The wrapper class in Java provides the mechanism to convert primitive into
object and object into primitive.

byte              Byte
short             Short
int                     Integer
long              Long
float             Float
double            Double
char              Character
booelan           Boolean

String     lenght() sunstring() trim() etc....
String s="welcome"

Data Conversion methods
--------------
String s1="10.50";
String s2="20"
String s="true"

String  ----> int           Integer.parseInt()
String -----> double    Double.parseDouble()
String ----> boolean     Boolean.parseBoolean()

int phoneno=12312387;

int ----> String         String.valueOf(data)
double--->String    String.valueOf(data)
booelan --->String     String.valueOf(data)
char---->String        String.valueOf(data)

String -->char  ( not possible)
```
